I know there are a lot of this kind of this test but I found almost all of them only give you download speed.

This one gives you the upload as well really nicely presented too.

open this website : <http://www.speakeasy.net/speedtest/>

Choose there Server that you want to test the distance from your places.

I take New York City.

now is downloading test.

That is my result : 2022kbps download 246 upload.

notes : The server are in US but I still can see exactly my speed of internet.

I'm in Kuala Lumpur, Malaysia.
